

# SupplyLogic

January 1, 2014

## Licensed Software Fees

- Base Package \$5,000.00.
- Quarterly software subscription fee: \$300.00.
- The software subscription fee is due and payable on or before the first day of each calendar quarter.
- The software subscription fee begins 30 days after the receipt of the licensed software and hardware.

### Optional software:

- o Remote Order Module: \$1,000
- o Remote Order iPad License: \$300 per device
- o Remote Order Windows License: \$250 per device
- o Quarterly fee is an additional \$50 for this module plus a small amount per device.

## Hardware

Following are the minimum system requirements to install SupplyLogic's server and client software:

SupplyLogic server software requires a PC using a complete and up-to-date Windows 7 or 8 operating system with a minimum of 4GB of memory (8 GB of memory is the recommended amount for a large number of items) and an i3 processor (or greater) with 3+ GHz of speed. *To ensure maximum performance and reliability, this PC should be dedicated solely to running the SupplyLogic server software.*

The server software must be installed on only one PC. This PC, on which the SupplyLogic database will reside, must be connected to the Internet in order to submit manufacturer reporting data, as well as receive system support and software updates from the SupplyLogic support staff. A broadband connection (DSL or cable) is required. A dial-up connection is not sufficient.

After the server software's installation is completed on one PC, the client software can be installed on other PCs (never on the same PC as the server software).

SupplyLogic client software requires PCs using a complete and up-to-date Windows 7 or 8 operating system with a minimum of 2 GB of memory and an i3 processor (or greater) with 2+ GHz of speed. As noted above, the client software can be installed on as many PCs as needed, but never on the same PC as the server software.

If your SupplyLogic system consists of more than one PC, all of the PCs must be networked together and successful two-way communication must be confirmed before the system is ever used.

Users are responsible for protecting the SupplyLogic database which is stored on their Server PC by:

- o Using anti-virus software, and an uninterruptible power supply (UPS) device.
- o Using SupplyLogic Utilities to backup the SupplyLogic database daily.
- o Saving a copy of the database backup files, and storing them off-site in a safe place.

Optional hardware:

- o Posiflex Cash drawer: 4000 Series
- o Scanner: Symbol USB - Any scanner you can configure to add brackets before and after scanned data.

### Services

- Internet training fee: The first 4 hours of online training is free; purchaser can use purchase additional training packages in one hour segments as needed.

### Conditions

If purchaser stops paying the software subscription fee purchaser must pay past-due fees to reinstate services.
